POULTRY LED LIGHTING LED Lighting is an essential aspect of poultry production. In most housing systems, artificial light is utilized to maximize production in pullets, layers and breeders. Today, a variety types of LED Lighting are available to illuminate the inside of a poultry house, all of which have benefits and shortcomings. Understanding the different lighting options available for poultry, as well as the terminology and management of light, is essential to achieve the best production.

Liaht is critical for eaa production and pullet growth. Domestic poultry see and respond to a different range of light color spectrum and have different spectral intensity responses than humans. While humans respond to light from around 380-780 nm, chickens can see UV-A light (315-400 nm) in addition to 400-750 nm. Additionally, the magnitude of sensitivity for red and blue spectra is much higher for chickens with additional peaks of light sensitivity around 480 nm and 630 nm.

In industrial farming, more intense light is used, while in a farm on a smaller scale focused on egg production, lighting with lower intensity should be used to increase the efficiency

of egg production. The level of light intensity in poultry lighting should be measured in a dedicated chicken lux unit. It is a specialized unit that allows you to select the appropriate light flux depending on the purpose of breeding. The selection of LED lighting for chicken farming carries many risks, one of them is working in difficult conditions and demanding conditions. The working environment of LED lighting, such as chemistry, makes it necessary to use materials that will ensure long and trouble-free operation of the LED module and the entire LED luminaire. In this area, thanks to our extensive experience, provide comprehensive protection for our modules and luminaires. There are challenges that are not a problem for us, because we select such elements at the design stage, which translate into longer and more effective operation of our solutions in the field of LED lighting.

There are no secrets for us in Poultry lighting. Trust our specialists who will choose the right lighting system for your breeding.
